

Docket No. AUS920000942US1

ABSTRACT OF THE DISCLOSURE

**METHOD, SYSTEM, AND PRODUCT FOR ALLEVIATING ROUTER
CONGESTION**

5

A method, system, and product are described for
alleviating router congestion when the router is
processing packets transmitted by computer systems having
a congestion notification capability. The router marks
10 packets transmitted between a first computer system and a
second computer system when the first and second computer
systems have the congestion notification capability. The
marking indicates that the router is moderately
congested. A marked packet is then received by the first
15 computer system. The router then drops packets
transmitted by the first computer system when the packets
were transmitted subsequently to the receipt of the
marked packet.
